A Description of the four Quarters of the YEAR.

And first of the WINTER.

Sol in ♑, ♒, ♓.

WInter quarter (after the Astronomers accompt) began the 11 day of December, 1652. at 2 of the clock in the morning, and continueth until the 10 of March this year 1653 at 2 of the clock in the morning: So that always the first part of the Astronomical winter is in one Politique year, and the latter end thereof is in the other, at which time was the shortest day of the year, by reason of the Suns greatest declination from the Equinoctial line.

This season of its own disposition is known to be cold and moist, contrary to the quality of Summer. And in this Quarter, the inward parts of man are very hot, and being healthfull may receive plenty of Food; because naturall heat is now comforted, and is gon inward, and there increased, & makes digestion the better.

How the Weather will be therein disposed, is noted for each day throughout the Quarter.

The Sicknesses whereunto this Quarter is most enclined, are Rhumes, Gouts, Pushes, Sore eyes, Melancholy, Coughs, Cathars, Sciaticaes, Pain in the breast and lungs, Headach, Falling Sickness, diseases proceeding of

rottennes and corrupt humors, with divers infirmities incident among Women, &c.

Of the Second Quarter of the year, called the Spring

Sol in ♈, ♉, ♊

The Spring time (being the most pleasant and wholesome Season of the foure) takes beginning on Thursday the 10. of March at in the morning, at which time the Sun enters into the first minute of Aries, the Equinoctial point, making the days and nights of equal length, which quarter endeth the 11. of June when the Sun entreth into Cancer

This season is naturally hot and moist, and is of the sanguine complexion, being the most temperate and healthfull time of the year, and is therefore accounted the fittest time to purge diseased bodies in, and to restore health again in those in whom formerly it hath been wasted by any kinde of evacuation.

The particular condition thereof, may be seen in the daily disposition of the season.

The Infirmities of this Quarter are, Measels, Melancholy, Madnesse, small Pocks, scabs, the Falling sickness, bleeding at the nose, Hoarsnes, Coughes, Agues, Collick, Cramp, paine in the joynts, Plurisies, shortness of breath, Faintings, Burning Feavers, and other strange diseases proceeding of corrupt blood.

Of the third quarter of the year, cald *Summer:*

Sol. in ♋, ♌, ♍.

Summer (accounted the third part of the year Astronomicall) taketh alwayes its beginning at the suns entrance into the first minute of Cancer, which is this year the 11. of June, being saturday, at 5. of the clock in the morning, at which time he maketh his greatest Declination towards the North from the Equinoctial, and causeth the longest day and shortest night in the year; and so summer holdeth on till the 12. of September following.

In this Quarter, the stomack cannot digest such hard meats as it will in the winter season, for that naturall heat is now distributed unto the exterior parts, and man is not now so hot within, as in Winter.

As for the disposition of the weather, you may see in the daily inclination.

The sicknesses generally of this season, are hot Feavers, and burning Agues, Frensies, Pulses, scabs, Jaundies, sore Mouths, with paine in the Head and back, and the like.

Of the fourth Quarter of the year, called Autumne, or Harvest.

Sol. in ♎, ♏, ♐.

Autumn or Harvest (being the fourth and last quarter of the year) beginneth on sunday the 12. of September, the sunne then making

making his entrance into the first minute
the second Equinoctiall signe *Libra*, work
the same effects, that he did at his entring
to Aries, that is, making the daies and ni
againe of equall length, hee rising at 6 in
morning, and setting at 6. at night; and
quarter doth last untill the 11. of Decem
following.

The quality of this season is naturally
and dry, yet by reason of its mutability,
the most unwholsome, by meanes whereof
more subject to sickneſſe then any other,
the Dreggs of all diseales of the former
of the yeare, will now burſt forth and be

How the Ayre is like to be inclines all
veſt, may be seene in the daily diſpoſitio
the Season.

The Diseales of this Quarter are
and dangerous, as Black-jaundies, Pegr
the Falling-sickneſs, Opilations in the Sp
Difficulty of Breathing, Convulſions, D
ſies, Sciaticaes, Biles, Tooth-ach, and
more: From which Good Lord deliver u

Of the Eclipſes:

There will be foure Eclipſes this yea
yeare, whereof the firſt of the Moone
onely be conſpicuous in England.

The firſt Eclipſe in order, is of the Sun,
on the 17. of February in the evening, t

seene in Magellanica, and the South parts of the world unknowne to us.

The Second Eclipse is of the Moone upon Friday morning, being the 4. of March, which will be visible in England, and (if the ayre be cleare) it will be observed totally darkned in the south west from 2. of the clock and 59. min: till 4. of the clock and 47. min. the beginning of this great Eclipse, or first entrance of the Moon into the earths shadow, will be at 1. a clock and 48. min. the middle at 3. a clock and. 53. min. the end and full recovery of light, at 5 a clock and 57. min. so that the whole duration of this great Eclipse will be 4 hours and 9. min.

The third Eclipse is of the Sun upon the 12. of August, to be seen in North America, &c.

The fourth and last is of the Moone upon the 29. day of August, to be seene in east India, China, Perico, Peru, Sumatre, Java, Barneo, Luconia, Molacco, Philippines, and New Guinea; &c.

Here followeth certain Physicall Verses, with a Description how the Planets are placed in the heavens, either before or after the Sun; wherby you may perceiv how they keep their Motions day & night.

To which is annexed the time of the new, Full, and Quarter of the Moon; with the daily disposition of the weather.

Also short Rules for Husbandry for every Month throughout the Year.

If thou be sick and help wouldst have.
The counsel of the learned crave: If

If thou hast health to keepe thee so,
Fly idleness as deadly so.

Saturn riseth at Sun-set, and sets at Sun-rise. Jupiter and Mercury are under the Sun beames, *Mars* is past the south at Sun-rise.

Venus is a morning starre, rising very glorious in the south east, at breake of day.

The 1. & 2. days, cold rain or snow, ful moone the 3. day, 18. min. past 5. of the clock at night.

The 3. 4. and 5. faire, cleere, and windy.

The 6. 7. and 8. somewhat cloudy.

The 9. and 10. flying cloudes

Last Quarter the 11. day, 24, min: past 7. of the clock at night.

The 11. 12. and 13. some cold raine.

The 14. and 15. more mild and temperate.

The 16. 17. and 18. much snow.

New moone the 19. day, 6. min: past 6. a clock in the morning.

The 19. and 20. winde and snow.

The 21. 22. and 23. not much unlike.

The 24. faire and frosty.

First Quarter the 25. day, 13. min: past 11. of the clocke at night.

The 25. 26. and 27. frost like.

The 28. and 29. indifferent.

The 30. and 31. fit for the season.

Ianuaries Instructions for Husbandry.

Decembers Instructions

This month and the next are best to fell great Timber in the old of the Moone; uncover the rotes of your Fruit trees, fallow land for Barley, cover herbs from cold, look well to your Cattel, take Foules with nets or twigs:

The meane distance of the Planets from the Earth, according to the Hypothesis of Harmonicon Cælestæ, fol. 98.

Saturn is distant from the earth, 11. millions, nine hundred fifty eight thousand, three hundred ninety foure German miles.

Jupiter is removed from the earth, 5 millions, five hundred fifty three thousand, five hundred seventy six miles.

Mars is distant from the Earth, one million, nine hundred and eight thousand, eight hundred twenty three miles.

The Sun is from the earth, one million, two hundred fifty five thousand, foure hundred seventy foure miles.

Venus and Mercury in their mean motions are distant as the sun, though sometimes they are far neerer, and sometimes againe farther remote.

The moone is distant from the earth, fifty thousand, eight hundred & nine miles. And here you are to take notice that the planets are not alwaies of this distance, but are commonly either neerer, or farther, in respect, that the earth is not the center of their orbs, but is placed between the orbs of Mars and Venus, as is Astronomically proved by Demonstration

Demonstratien, by Coprrnicus, Kepler B[illegible]
dus, and by our Countrey man U. Wing, [illegible]
forementioned late Book of his, where[illegible]
Reader shall not only find satisfaction here[illegible]
in all the principall parts of Astronomie, re[illegible]
ing both the first and second motions of the [illegible]
venly Bodies.
